A Push Model Vacuum Seeder

Now even the smallest farm can employ the highest technology to benefit from precision seeding.

The highest precision in planting small seeds generally requires a vacuum planter to select and plant a single seed at a given interval. This avoids the need for thinning and makes weeding easier because it insures uniform intervals between plants in the row.

Until recently vacuum seeders were designed for use with (4) wheel tractors or multi row units for (2) wheel walking tractors. The most modest setup costs \$7,500 with many, more like (3) times that price.

Today we can offer a push model for \$2,395 that uses a 12 volt battery power source to operate a vacuum seeder mechanism that places a single seed, no matter how small, at the interval you choose. Whether you want them (2) inches apart or at greater intervals this unit consistently plants a single seed maximizing plant vigor, saving labor and making the most of growing space as well as conserving expensive seed.

The **Seed Ace** comes complete with:

•Battery charger	•Extra battery	•Two sets of nozzles for planting various sizes of small seed:
		 <p data-bbox="966 1617 1378 1753">  Red nozzle set consists of 4 nozzles, each with 2 seed pick-up holes, size .06 </p> <p data-bbox="966 1774 1378 1900">  Black nozzle set contains 8 nozzles, each with 1 seed pick-up hole, size .09 </p>
