
Agriforma

Liberate yourself from tedious work that wastes your time. Turn grass covered field into perfect raised seedbed in one pass. One trip over your growing area produces a 40" bed top raised, shaped and ready to plant, stones, root clumps and similar debris are buried several inches below growing area. A built in rear tool bar allows you to even seed in that one pass.

This machine is derived from a rototiller but eliminates the negatives by the use of straighter specially angled blades that do not smear subsoil. The larger diameter of the rotor increases aeration. A curtain of spring steel tines deflect rocks and root clods to the bottom of worked area.

Long available in large versions it is now available in this 30 HP version for \$7,200. Smaller scale growers gain an edge by labor savings and speed up of sequential plantings. In

one pass old crop residues are incorporated and a renewed bed is ready to plant again without time consuming raking out of debris.

Combining Agriforma with precision seeders like Stanhay Robin 840(s) can reduce thinning labor on the one-hand and maximize return per square foot of growing area on the other. Each Stanhay unit singulates seeds and plants them in 1,2,or 3 lines at precise interval optimizing plant vigor. Uniform plant spacing helps suppress weeds because crop plants shade out competing volunteers.

It is the smaller grower who has the most to gain by adopting these machines; less time spent switching implements, less time weeding and thinning, leaves time and energy to pick and market at peak of quality.
