Cultiline Bed Shaper

The most impressive and effective bed shaper is the "Cultiline", made by Falc. Its rotor is equipped with chisel like teeth that strike soil at right angles for maximum penetration of hard soil clods. Their close spacing gives a thorough breakup of clods, yet the sharp tapered points do not smear subsoil.

A four speed gear box allows you to control rotor speed to prevent over working of soil by excessive rotor speed. You choose a speed that gives the tilth you need without powdering the soil. The adjustable gage wheels allow you to choose the depth of work to fit conditions. The rear firming roller is also adjustable to control bed top consolidation.

The Cultiline 1300 is the perfect implement to follow a 59" wide spader to form an ideal raised bed. Those who use a disc for primary tillage will save a great deal of time and trips across the field by using the Cultiline in place of secondary discing or harrowing. One pass with the Cultiline produces perfect tilth and a ready to plant slightly raised bed.

Get Ahead with Cultiline Bed Shaper

Get an earlier start on growing your next crop by building your beds in the fall. Till under crop residues and form new beds, covering them with compost as thick as possible or plant wheat, barley or a rye grain as a cover. When you need bed, flail and do a very shallow tilling to remove cover and weeds, your bed will warm, faster and you do not need to wait for subsoil to dry to dig beds. You can take rear roller off Cultiline and raise tiller so you work only the top 2 inches before planting.
