Disc Mower for Small Tractors

The disc mower is ideal for making hay but also handles brambles better than syclebar mowers. Cuts clean, following ground contours and does not plug up. Each disc is mounted on its own ball bearing supported spindle and driven by adjacent spur gear, also ball bearing supported, giving smooth efficient power transfer. A (4) disc model cutting 63" swath, suitable for 30 HP, costs \$4,000 delivered. Other larger models up to 9 ft. cut are also available.
