### New Riding Greens Harvester

The Ortomec SP 100 permits small to mid-size growers to harvest salad greens and culinary and medicinal herbs at amazing speed. Cutting a four foot wide bed top cleanly and uniformly at up to (2) miles per hour. Besides amount

of labor saved the product is much higher in quality with a longer shelf life. Product is not squeezed and is cut cleaner by razor sharp band saw cutting head. As a bonus a product not handled as much greatly reduces chances of contamination.

With many in use in Europe and (2) in USA this season, this beautiful machine performed very well. A ten HP diesel engine powers it, it's rubber crawler tracks spread it's weight out well so multiple cuttings can be made on a bed. The operator stands on platform to guide operation via a joystick control lever and monitors operation. Operator stops machine to set loaded totes on ground and to put empty ones in place and resumes full speed harvest. Base price \$26,000. Savings on paid labor, savings on wear and tear on owner operators, freeing of time to improve marketing and a better quality end product will soon repay the cost and start to increase profits.
