## Harvestar

For about \$10,800 plus freight you can have a proven machine delivered that can harvest many hundreds of pounds per hour of greens, culinary herbs or medicinal herbs. The product will be cut cleanly and unrumpled, unlike hand cutting that requires grasping handful of prod-

uct. These products are most appealing to customers when unwilted and unbruised by excessive handling or irregular cuts. The Harvestar adds product value and saves labor, less hours on your knees cutting, means more time and energy to give the rest of the enterprise.

Harvestar cuts with razor sharp cutter bar at a uniform height and delivers product untouched into totes. All surfaces in contact with product are stainless steel and food grade plastics. Rinsed down with distilled water containing food grade sanitizers, the Harvestar and clean totes make it easy for you to deliver a clean superior product with full confidence.

Because the Harvestar works so quickly and effortlessly, your greens can be harvested at the last moment before market day to give the maximum benefit of a crisp, just cut quality to a highly perishable product.

Now available with a bandsaw cutting head it allows still faster cutting. Weak stemmed crops like wheatgrass are efficiently harvested with bandsaw version, Price \$12,000 plus freight.

Standard unit uses wave edge stainless steel blade that moves from side to side. Band saw version uses similar but continuous cutting blade. Each cuts 28" wide swath.
