Ideal Spreaders

Here are ideal spreaders for people who do not use four-wheel tractors because they are too heavy or not suited to a confined growing area. A hand controlled unit allows you to go where tractors cannot and in conditions that are wet or too soft for a four-wheel tractor.

The first walking compost spreader that has its own engine to spread lime, rock phosphate, rock dust, or compost. This one costs \$5,500.⁰⁰ FOB Sacramento or Vermont and uses a single spinner to fling (broadcast) as it comes off its belt. It can spread 3 feet up to 20 feet wide. Weighing less than 300 lbs. empty, it is ideal for vegetable beds or other applications.

This model is heavier, weighing about 700 lbs. It also spreads all sorts of material by using a brush to unload the belt, and hence it puts down a 30 inches wide strip. This model costs \$7,500.⁰⁰ plus freight from the factory in Pennsylvania.

Here is a powered wheelbarrow. Its own gas engine drives it and also powers a hydraulic cylinder to dump its load. It costs \$1,700.⁰⁰ FOB Gridley, California.
