Ideal for Market Farmer

New tiller that saves labor like no other. The stone/debris burying tiller allows you to rototill cover crop or crop residue leaving level, ready to plant seed bed in one pass. Stones, hard clods, crop residue, twigs, rooted sods, etc. are buried while fine crumbled soil remains on surface.

See hard clods and other debris at bottom of cut while several inches finer soil are placed on top where mesh roller firms surface.

Several important benefits result from use of this type of tiller besides saving hand labor and time required to rake out debris: you do not need repeated passes with the tiller. Fewer tiller passes reduces damage to soil tilth caused by over working top soil.

The benefits of this innovative tiller are available to those who use walking tractors with diesel engines of 10 to 14 HP and those with 13-18 HP gas engines. Many other models can also be had for 4 wheel tractors of all horsepower's.
