Increase Profits by Adding Value

Whether you produce whole organic grains for artisan bakers or specialty bean varieties for gourmet cooks the key implement is a threshing machine. These niche markets generally require the grower to diversify the varieties grown while supporting relatively

moderate production levels. A low cost sickle bar mower can handle the cutting phase but clean efficient threshing of grain and beans is not easily done by hand.

The solution is an Italian made portable 7 HP diesel powered threshing machine with a seed cleaner to process crops from wheat to beans with adjustments of rotation speeds and sieves. Weighing 1,000 lbs. and with an output of 1,100 to 1,500 lbs. per hour this is a serious tool yet easily transported in bed of a pickup. This is an ideal tool for a small coop or as a rental unit. Its price of \$11,000 delivered at East coast port is \$5,000 below any domestic made unit of even approximate capacity or quality.

Get together with a couple of like-minded growers, share the benefits, and bring down the cost for all involved.
