## Meet the "GR"

New from Italy an ideal tractor for market gardeners and other specialty crop producers as well as groundskeepers. This 23.5 HP diesel is just 38" wide, when equipped with ag tires, and 100" long and can work tools in front or behind the driver and makes the change in seconds when driver module pivots 180 degrees. Jobs such as mowing, cultivating and forklift work are much more efficiently carried out when implement is in front of driver. Imaginative engineering uses drivers weight in reverse mode to actually increase implement handling capacity.

Tractors 1600 lbs weight is spread equally over the four drive wheels. The tractor has a hydrostatic transmission eliminating the need to shift gears and use a clutch. A single foot pedal controls forward speed and change to reverse direction making it easy to creep up to and around obstacles as in mowing around trees and immediately speed up in open ground.

Tractors low profile lets it work easily in shade houses, green houses and in high density orchards. Lower design makes tractor easy to get on and off and makes tractor more stable on slopes.

Tractor has Cat I 3 pt with 540 RPM PTO so that hundreds of implements are interchangeable. The tractors engine is a 3 cylinder water cooled Perkins diesel engine. Perkins engines are world famous and are used in many tractors and industrial machines in USA. This insures easy service and parts supply.

At \$16,500 this tractor costs \$7,000 less than the only comparable tractor on the market in USA. None of the captive brands sold by John Deere, New Holland, Massey Ferguson, Case IH and the rest can offer all the features. Kubota and Kioti, the dominant sellers in the low HP and low cost category, can not match all the features at any price. They all lack the imagination and/or the technology required.

Ferrari Tractor CIE, as a leading supplier of appropriate technology for agriculture, offers the model we call the "GR" for \$16,500 Fob Seattle, Washington. We can arrange low cost delivery to all 50 states and US territories. Let us get one on its way to your farm today.
