Truely Innovative Shredder

The "Muster" shredder is radical in design, beautiful in execution and perfect in performance. Dual rotors one equipped with hammer type blades takes down brush and woody debris and second rotor with Y blades reduces wood chips and grass to a very fine mulch. These rotors turn at 3000 and 3300 rpm respectively, 50% faster than conventional shredders, allowing the "Muster" to work at higher ground speeds. Shredder has hydraulic offset left and right and hydraulic top link permits raising and lowering leading edge of machine to allow aggressive engagement of tall brush or vegetation and central roller controls ground clearance.

Mounting in front of tractor is the ideal application but a moveable "A" frame permits "Muster" to work behind tractor as well. Today you can order it as a 1.5 meter model (59") for \$8,000. Soon a 1.2 and a 1.8 meter model will be added to the line. No faster, cleaner, finer cutting shredder exists anywhere in the world today. It equips the reversible tractor to demonstrate one of its greatest utilities.
