New Ortomec Greens Harvester

A new intermediate scale greens harvester is now available at an economically viable price. This 3pt, pto driven model made in 39", 48" and 51" wide versions fits even small tractors. Band saw cutter harvests clean cut undamaged produce faster than 10 expert hand cutters could produce. All surface in contact with the product are food grade stainless steel and plastics. Light weight design and full width rollers prevent damage to plant crowns permitting subsequent cuttings. The "jewel like" construction by a long time manufacturer of large scale harvesters costs just under \$17,780 or less then 1/2 the cost of other 3pt models.
