## Small Pull type Combine again available

A new enterprise has gathered 30 some combines with 60 inch, 66 inch and 72 inch headers. These machines are stripped down to a bare chassis and refurbished through out using renewed parts and remanufactured replacement parts, repainted and put into working order. A 60 inch header model sells for \$15,000 ready to work Fob Ohio. Delivery to either coast runs a little under \$3,000.

These are pull type PTO driven units working with 30 HP tractors. These units are famous for handling harvest and threshing of all kinds of seeds from clover to wheat to soybeans etc., etc. They weigh about 3600 lbs and for thirty years were the backbone of American grain production. Their revival makes small scale and moderate scale grain production practical again.

A 50% down payment today will have your combine ready for Mid June harvest. The first 2 have entered the refurbishing process. Make yours number 3. The men running this business have used and repaired these machines for many years on an ad hoc basis but have decided to campaign to restore as many machines as possible while suitable restorable machines still can be found in the Midwest.
