Supply Your Own Organic Feed

New, small, round baler allows small scale growers to harvest all sorts of feed stuffs easily. By growing organic grains, grass forages, and legumes and baling them you can store substantial quantities in small area. Whether you raise ducks, chickens, turkeys, geese, sheep or goats, there is no need to thresh grain. Just roll out your small bales, these livestock will pick out and digest nutrients without further processing. If you keep cattle, the small bales can be fed through small grinder to make grains more digestible to cows.

The Gallignani MB60 needs only a 15 HP tractor to power it and produces a round bale 25" long and 22" in diameter weighing just 40 to 60lbs. This small machine is just

78" long, 53" wide and 46" high yet is sophisticated allowing control of bale density and ejection from tractor seat. Gallignani is the worlds 2nd largest producer of balers and first in quality.
