The Ultimate Tractor

Introduced this year the Fastrac 8250 243 PTO HP has no equal for farm or soil remediation work. Front and Rear 3 pts and PTO's, air brakes antilock brakes and fully suspended chassis make it capable of 40 mph on road safely even when carrying heavy tools. It's full suspension and wide range of ground speeds as low as 0.4 mph to 26 mph in low range and 10 more in high range makes every kind of work possible.

Tools like Dyna drives and the Falcland rotary chisel can be utilized to their full potential to prepare grain land for planting in a single pass at high speeds. The four wheels are all driven and carry equal part of the load because Fastrac air suspension can distribute weight to fit tools used. Cat II front 3 pt. and Cat III rear 3 pt. used simultaneously save passes over the field saving fuel and reducing soil compaction and labor costs.

Prices are mid range among this horsepower category tractor yet only one 150% more expensive make of tractor can even approach the performance of the Fastrac.

If you can utilize this high level of performance and can justify \$225,000 or more let me get you one of these - a lower power version with many of the same features can be had at prices starting at \$150,000.
