

# Transpread

A new Compost/Fertilizer Spreader has just become available and is being built by a California Specialist in spreaders. S & A Manufacturing has long produced extremely well made equipment and are expert at working stainless steel and individualizing machines to fit special circumstances.

The new low, narrow Transpread model 300 is ideal for narrow rows, low overhanging branches and steep terrain. It is 51 inches wide and 51 inches high giving a low center of gravity and making it easy to load the (2) yard box. It's box, spinners, apron and baffles are all stainless steel, ideal for corrosive manures and other acidic materials. Large 11:00 x 15 tires give good floatation on soft ground and minimize compaction.

A two speed gear box allow ground drive to move the (16") floor chain and load to the spinners at the appropriate speed to accommodate materials that go on at low rates such as trace elements and those that go on at high rates such as compost. The ground speed drive guarantees that whether you drive slowly or faster the rate of delivery remains consistent. The spinners are hydraulically run from tractor auxiliary outlets with speed and therefore width of spread, set with a built in flow control valve. The ability to control speed of spinners means you can broadcast material the same width from a standing start to full speed. Optional adjustable baffles allows you to control width a spreading band.

This ultra high quality machine with 12" floor chain costs \$11,950. Another version with 20" floor chains and (3) speed gear box costs \$13,125. These are built to order so order sooner rather than later.
